

Schonenberg Estate

List of Undesirable Plants for Residential Gardens April 2019

The following is a list of plants that are undesirable for residential gardens for a number of different reasons. Some can cause damage to boundary walls, pavement and the sewerage system due to their root systems or tendrils. Some of these plants can escape from a residential garden into common property by means of profuse seed production or creeping, climbing, invasive nature and thereby are in direct competition with plants in the Estate's landscaped common areas, the majority of which are indigenous species.
